

LIVE BATCH STARTS · 20th June 2026

The Ultimate AI Course.

Zero to deployed AI agent. Live sessions. Real code. Real tools. Deploy on the cloud.

While you're reading this, someone else just enrolled.

The Course, **At a Glance.**

One course. Zero to deployed. Microsoft certified. No fluff, no filler — just the skills, tools, and proof of work that get you hired.

4

Live Modules

Foundations to Deployment.
Zero filler.

100+

AI Tools Mastered

Tools others are still Googling.

8+

HR of Live Instructor Sessions

Real-time. Hands-on.
No excuses.

1

Microsoft AI-900 Voucher

Exam included. At no extra cost.

₹7K+

Free Bonuses

Books · Workshops · Career Guidance

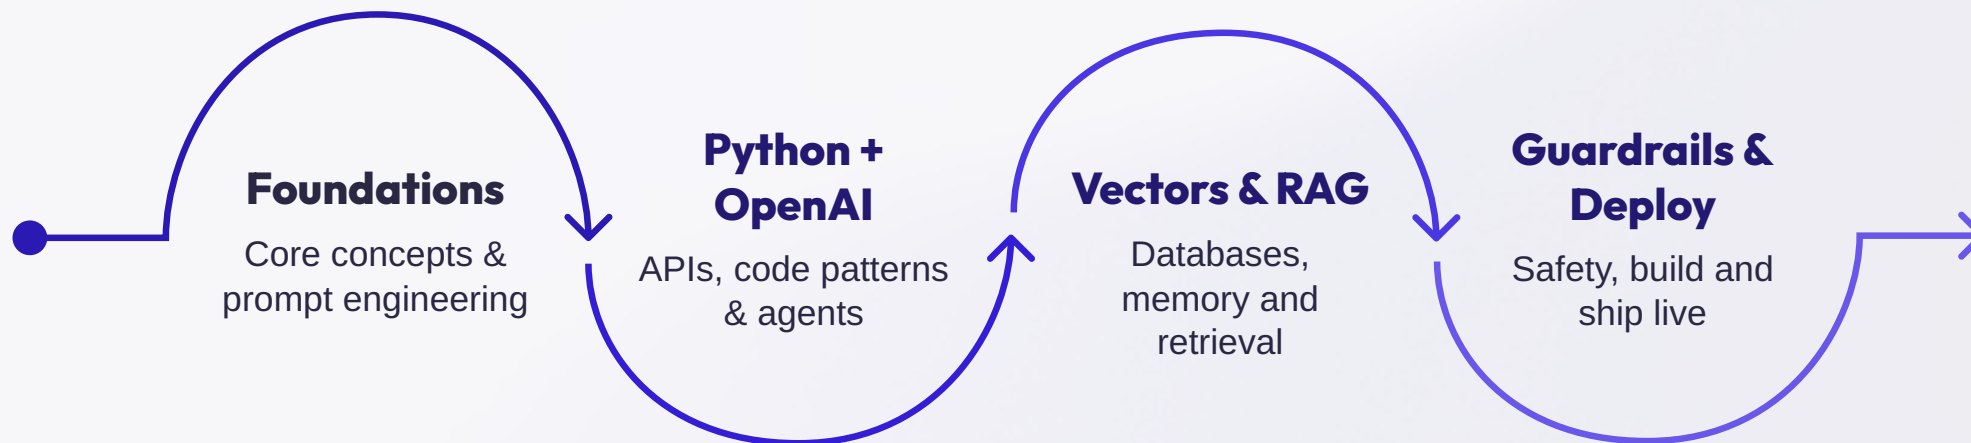

30

Seats Only

Fills every batch. This one is no different.

4 Modules. Progressively Heavier.

Build on the last. Ship on the last. 8+ hours total — no padding, no reruns.

MODULE I · 2+ HOURS · FOUNDATIONS

AI Foundations & Prompt Engineering

Session 1 · Build the mental models, vocabulary, and frameworks that make every future session click faster.

What You'll Master

- AI vs Human Intelligence — where machines win & where they fail
- The AI Challenge — bias, hallucination, context limits, alignment
- Embeddings Explained — vector space, semantic similarity, cosine distance
- AI Agents vs Agentic AI — the critical distinction most people get wrong
- AI Terminologies — workflows, skills, tools, memory, orchestration, loops

Prompt Engineering Frameworks

- RTC Framework — Role, Task, Context
- Chain-of-Thought — step-by-step reasoning
- Few-Shot Prompting — guide outputs with examples
- Master Matrix — the cheatsheet you'll use forever

Bonus: Prompt Engineering Booklet

- 📄 Get a curated Prompt Engineering Booklet with 50+ sample prompts across domains — marketing, coding, research, content, and more.

Earning Possibilities

- Freelance Prompt Engineer — ₹5K–₹20K per project
- AI Content Creator — channels, newsletters, social
- AI Tool Consultant — ₹10K–₹50K/month retainers
- Build & Deploy Single-Page Games — ship playable projects with AI
- **Personal Portfolio Site — build and deploy your own portfolio live**

MODULE II · 2+ HOURS · CODING BEGINS

Python + OpenAI + Agent Foundations

Session 2 · No prior coding needed. By the end, you'll have written, created agent and run real AI code.

i 🙌 Zero coding background? Perfect starting point. We go from scratch — variables to agents in one session.

What You'll Master

- Python for AI — variables, functions, loops, pip, .env — only what you need
- OpenAI API — auth, completions, chat models, temperature & parameters
- OpenAI SDK — agents, runners, instructions, handoffs, tool-calling.
- Streaming & Tracing — real-time output, observability, debugging live agents
- GitHub — push code, version project.

MODULE III · 2+ HOURS · CORE INFRASTRUCTURE

Vector Databases, RAG, MCP & Memory

Session 3 · The layer most AI courses skip entirely.

→ Chroma DB — Vector Database

Chroma DB — the vector DB you'll actually build with.
Store, query & retrieve embeddings in production.

→ Embeddings + Semantic Search

Turn text into meaning machines can compare.

→ Hugging Face

Open-source models, embeddings, model hub.

→ RAG — Full Pipeline

Chunking, retrieval, ranking — end to end.

Advanced Capabilities

MCP + EXA Search

Live web search as a
callable agent tool.

SQLite Session Memory

Persist context across
conversations.

Multi-Agent Systems

Delegation, handoffs, parallel execution.

This module alone is what most AI courses never teach.

MODULE 04 · 2+ HOURS · SHIP IT

Guardrails, Build & Deploy Live

Session 4 · You don't just finish the course. You ship agent for real.

01

Guardrails

Input/output validation — safe, reliable, production-ready.

02

AI-900 + Azure Fundamentals

AI Workloads, AI-as-a-service, certificate prep.

03

Build the Nutrition AI Agent chatbot

All 3 modules converge. Build it end to end.

04

Authentication + Cloud Deployment

Secure it. Push it live. Full deployment pipeline.

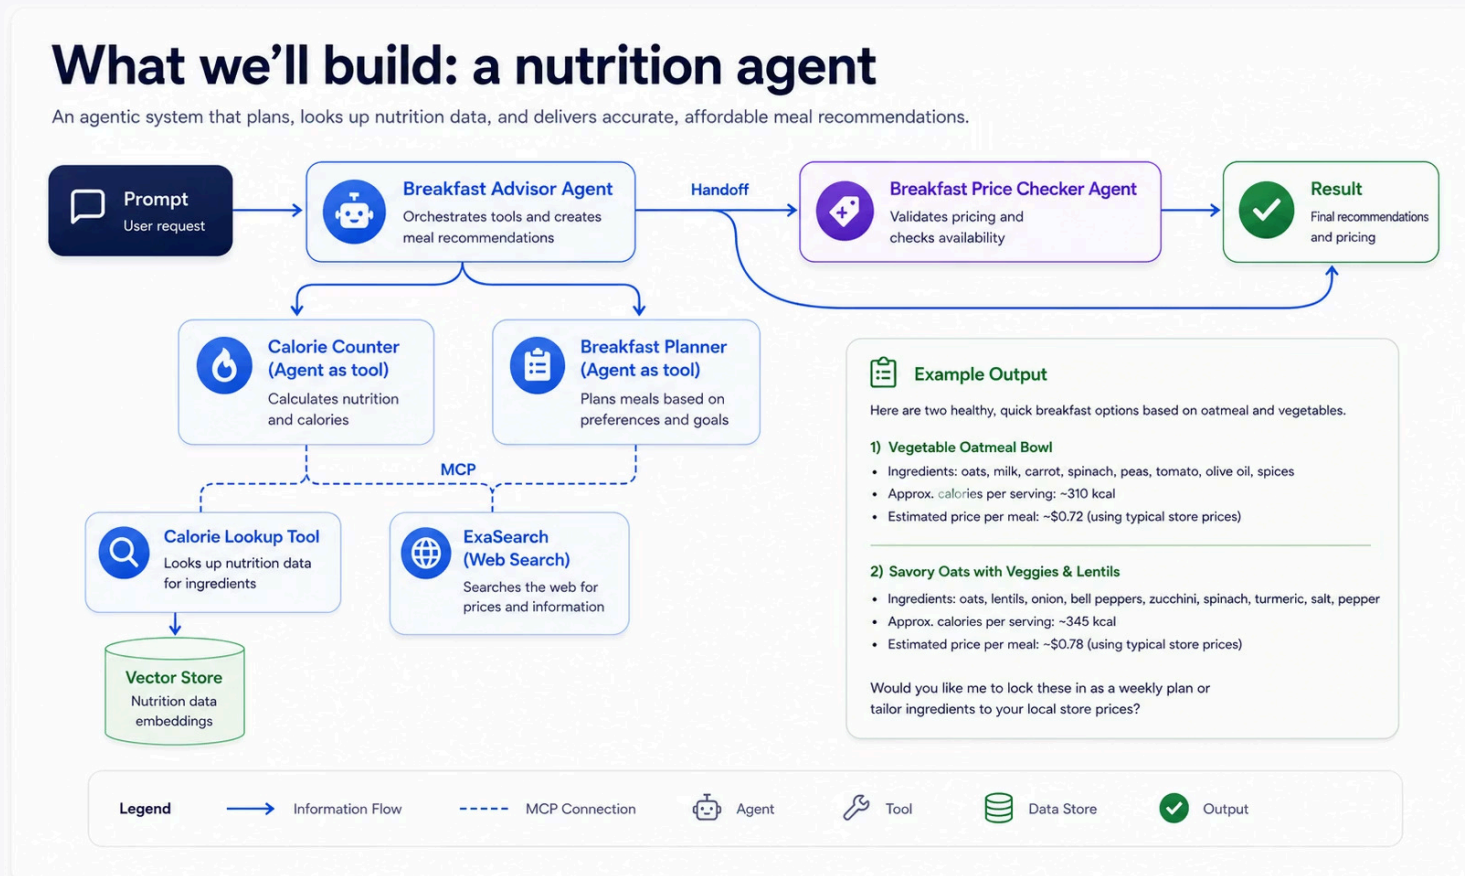

05

Live Project + Portfolio Walkthrough

Leave with a working URL — and how to pitch it in interviews.

The Capstone: Nutrition Coach

Not a tutorial project. Not a sandbox demo. A real multi-agent AI system — live on the cloud, with your name on it.

How It Works

01

User Sends a Prompt

Natural language input — 'Give me a healthy breakfast under 400 calories.'

02

Breakfast Advisor Agent

Orchestrates the workflow. Delegates tasks to specialist agents via handoffs.

03

Calorie Counter + Planner

Two agents as tools — one calculates nutrition, one plans the meal.

04

Price Checker + Exa Search (MCP)

Validates prices in real-time using live web search via MCP.

05

Final Output Delivered

Accurate, affordable meal recommendations — with pricing and calories.

What Makes This Real

Multi-Agent Architecture

Orchestrator + specialist agents. Exactly how production AI systems are built.

Chroma DB + SQLite Memory

Vector store for RAG. Session memory that persists across conversations.

MCP Tool Calling

Live web search baked in. Your agent knows what's happening right now.

Deployed on the Cloud

Accessible URL. Not localhost. Real infrastructure. Real portfolio piece.

The Tech Stack Covered

Production-grade. Industry-standard. Every tool you'll use is what real AI engineers works with today.

Core Stack

| | |
|---|---|
|  | Python The language of AI. Zero to fluent by Session 2. |
|  | OpenAI Agents SDK Agents, runners, handoffs, tool-calling — production-grade. |
|  | GitHub Version control, portfolio building, recruiter-ready repos. |
|  | ChromaDB Vector database for semantic search and RAG pipelines. |
|  | Hugging Face Open-source models and embeddings on demand. |

Tools & Frameworks

OpenAI API

GPT-5o, completions, chat — the world's most powerful API.

MCP (Model Context Protocol)

Tool-calling standard. Connect agents to any external service.

Exa Search

Live web search as a callable agent tool. Real-time knowledge.

SQLite

Session memory. Persist context across conversations.

Guardrails

Input/output validation. Safe, reliable, production-ready agents.

  Every tool here is free to start with. No expensive subscriptions needed to build and deploy your capstone project.

Students who completed the capstone

“

"I joined to learn AI basics. Three weeks later I was live-demoing a deployed RAG chatbot to my tech lead — and got promoted the same month."

Riya Sharma

Data Analyst → AI Engineer ·
Infosys

“

"Eight months of 'planning to learn AI.' One batch later — working agent on the cloud, GitHub portfolio, two interview calls in the same week."

Karan Mehta

Backend Developer · Razorpay

“

"Non-coding background. No Python. But I never felt lost. My Nutrition AI Agent is on LinkedIn now — and recruiters bring it up in every interview."

Priya Nair

Product Manager → AI Product
Builder · Early-stage Startup

30 seats per batch. Every single one fills. The next person to enroll could be the one who takes your spot.

Everything Included.

Everything to go from complete beginner to deployed AI engineer — certified by Microsoft.

What You Get:

**4 Live Modules —
8+ Hours of Pure
Build**

**100+ AI Tools —
Master What
Others Google**

🔒 AI-Proof Career

⚠️ ⚡ Price goes up next batch.

Walk In Job-Ready. Not Just Course-Ready.

These are real interview questions from AI Engineer roles at top companies. You'll answer every single one — because you'll have built the systems behind them.

Technical Questions You'll Nail

Prompt Engineering

"Chain-of-thought for multi-step reasoning?"

Zero-shot · Few-shot · CoT — you'll know when each wins.

RAG Systems

"How do you eliminate hallucinations in production RAG?"

Chunking · Re-ranking · Retrieval confidence thresholds.

Agentic AI

"When does an agent call a tool vs answer from memory?"

ReAct loops · Tool-use reasoning · Context window management.

System Design You'll Own

Vector Databases

"SQL vs Vector DB — what's the real difference?"

ANN algorithms · Semantic similarity · ChromaDB in production.

Azure / AI-900

"Where does AI-as-a-service fit in cloud architecture?"

IaaS · PaaS · SaaS · Azure OpenAI — fully covered.

End-to-End System Design

"Design a RAG chatbot on internal company docs."

Ingestion → ChromaDB → Retrieval → LLM → Guardrails → Response.

✔️ 1000+ curated AI Engineer interview Q&A with structured answer frameworks — included in the course. Covers entry-level to senior roles.

⚠️  The students who answer these cold in interviews are the ones who built the systems. That's exactly what this course makes you do.

Career Opportunities **Waiting for You**

The AI job market is exploding. These are the roles this course directly prepares you for.

The Fear

- Am I already too late to break into AI?
- Will I get lost without a CS degree?
- What if I build something no one hires me for?
- Everyone else seems ahead of me.

The Solution

- Build a real, deployed AI system — not a tutorial clone
- Learn the exact stack top companies use today
- Get Microsoft certified to prove your skills
- Join a cohort of builders, not just learners

| | | |
|--|--|--|
| <p>AI ENGINEER </p> <p>BUILDING AND DEPLOYING AI AGENTS AND SYSTEMS</p> | <p>ML ENGINEER </p> <p>PRODUCTION MACHINE LEARNING PIPELINES</p> | <p>PROMPT ENGINEER </p> <p>DESIGNING AND OPTIMISING LLM PROMPTS</p> |
| <p>AI PRODUCT MANAGER </p> <p>LEADING AI-POWERED PRODUCT DEVELOPMENT</p> | <p>CLOUD AI ARCHITECT </p> <p>DESIGNING AI INFRASTRUCTURE ON AZURE AND AWS</p> | <p>TECHNICAL AI EDUCATOR </p> <p>TEACHING AND BUILDING AI LEARNING CONTENT</p> |

 Every role above is actively hiring now. The difference between candidates who get calls and those who don't?

A deployed project and the vocabulary to explain it.

This course gives you both.

Don't Miss **This Batch.**

Batch starts 20th June. Every day you wait, someone else gets further ahead.

Option A — Do Nothing

- Still bookmarking tutorials you'll never open
- Watching others ship on LinkedIn
- Waiting for the perfect time. It's not coming
- Falling further behind every week

Option B — The Right One

- A live URL with your name on it
- A GitHub portfolio recruiters actually open
- Interview answers backed by real experience
- The confidence of someone who has shipped

The people enrolling today will be deploying AI agents. You'll still be deciding.
